

BF358 STRIP-SWITCH

CALL SIGNALLING SYSTEM

Introducing our new cost-effective 'Strip-Switch' call signalling system, specifically designed to help make C-TEC's call systems more accessible to those who need them most - people calling for assistance.

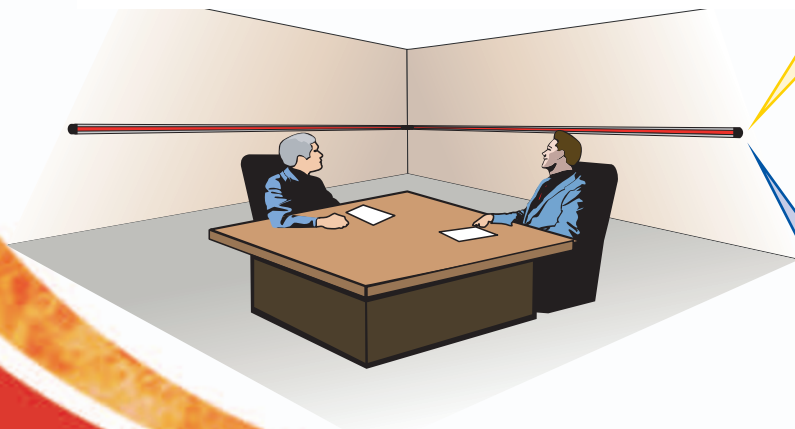

Easily interfaced to our 800 Series conventional call system, Quantec addressable call system or NC951 disabled persons toilet alarm system, sections of the strip-switch can be installed in continuous lengths over extended areas.

Available in a variety of different lengths, the system can be installed at any height on a wall, out of sight under a counter or along a machine panel with the full length of the strip activating a call signal when pressed.

- Easily operated by a finger, hand, foot or elbow
- Full length of strip activates a call / panic alarm signal - allows assistance to be summoned quickly and easily from a variety of locations
- Requires minimal maintenance once installed - manufactured from anodised and powder coated aluminium with a PVC insert for ease of cleaning
- Available in a variety of different lengths and colours to suit most modern decors
- Co-ordinated adjustable corner pieces allow the strip-switch to be continuous through internal and external corners and up and down staircases
- Compatible with C-TEC's 800 Series conventional call system, Quantec addressable call system and NC951 disabled person toilet alarm systems (see overleaf for details of our NC951STRIP kit)
- Can be used to generate different levels of call depending on the wiring configuration and/or interfacing devices used - see below and overleaf for options
- Ideal for straightforward call signalling applications or as an out-of-sight 'panic alarm' when installed under counter tops or interview room desks, etc
- Other applications include factories (alongside machines), security areas, hospitals, police stations, prisons, residential care homes, disabled persons toilets, etc

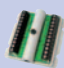

Example strip-switch interview room system

800 Series Conventional Call System Interfaces

-  **NC889 Call Latch Module**
(generates standard calls)
-  **NC889ERM Multi-Purpose Call Latch Module** (generates standard or emergency calls)

Quantec Addressable Call System Interfaces

-  **QT602 Quantec Call Point**
(generates standard calls)
-  **QT604 Quantec Monitoring Point**
(generates standard or emergency calls)
-  **QT611 Quantec Universal Device**
(generates standard, help required, emergency or attack calls)

STRIP-SWITCH PART NUMBERS & DESCRIPTIONS

BF358/1	0.3m strip switch kit (includes satin silver base rail, red insert and end caps)
BF358/2	1m strip switch kit (includes satin silver base rail, red insert and end caps)
BF358/3	1.5m strip switch kit (includes satin silver base rail, red insert and end caps)
BF358/4	2m strip switch kit (includes satin silver base rail, red insert and end caps)
BF358/5	2.5m strip switch kit (includes satin silver base rail, red insert and end caps)
3m, 4m, 5m, 6m, 7m & 8m strip switch kits also available - contact our sales desk for details	
BF358/12	1.5m strip switch base rail, satin silver
BF358/15	1m strip switch insert, black
BF358/16	1m strip switch insert, red
BF358/17	Strip switch end caps, black (pair)
BF358/18	Strip switch internal/external corner unit c/w end caps, black
BF358/19	Wired sleeves and tags (pack of 5)

800 SERIES CALL SYSTEM INTERFACE UNITS

NC889	Call latch module (generates standard calls)
NC889ERM	Multi-purpose call latch module (generates standard or emergency calls)

QUANTEC CALL SYSTEM INTERFACE UNITS

QT602	Quantec call point (generates standard calls)
QT604	Quantec monitoring point (generates standard or emergency calls)
QT611	Quantec universal device (generates standard, help required, emergency or attack calls) (Requires QT423 configurator)

DISABLED PERSONS TOILET ALARM / STRIP-SWITCH KITS

NC951STRIP	Disabled Persons Toilet Alarm kit c/w 1.5m strip switch kit & call latch module
