Fire event on GUIDE Net user screen showing escape route

Features

- Up to 250 GUIDE Net users may be connected to a single GUIDE system
- Automatically runs as a background program on the users computer.
- Automatically loaded from computer server when the user logs onto the computer network - does not need to be installed on each computer
- Provides specific text and/or graphical information depending upon the event type and the source of the event.
- Option to lock the end user computer for fire events, to speed up the evacuation process.
- Low RAM memory usage on target computer
- Images and text transferred across computer network. Does not affect disk capacity
- Support for animated map graphics
- May be used in conjunction with GUIDE Repeaters.

Product Overview

- Syncro GUIDE Net is an additional facility for the Syncro GUIDE fire alarm management system.
- GUIDE Net allows information relating to the Syncro fire control system to be automatically displayed on up to 250 computers connected to the building Local Area Network.
- GUIDE Net is highly configurable so that different group of users may be presented with a combination of images and text when fire related events occur.
- This product allows fire event location and escape route details to be automatically displayed.
- May be configured to announce commencement of the weekly fire test.
